Eisai Co., Ltd.

Notice of Emergence of Employees Infected with the Novel Coronavirus at
the Bogor Plant in Indonesia

Eisai has ascertained that 9 employees working at its Indonesia subsidiary PT Eisai Indonesia's Bogor Plant have been infected with the novel coronavirus infection.

On December 4th, the infection of one employee was ascertained. As of December 9th, as a result of conducting PCR testing on all employees at the plant, 9 employees including the initial infected employee were confirmed positive for the novel coronavirus.

Regarding the Bogor Plant, operations have been temporarily stopped from December 4th to 13th, and operations will resume on the 14th. There are no issues with the quality and the stable supply of products produced in this plant, and there are sufficient stocks of products.

Eisai is taking measures for the prevention of infection including measurement of body temperature upon arriving at work, hand-washing, disinfection, usage of masks, and maintaining social distance. In addition to continuously acting to maintain the safety of all partners and employees as a highest priority, Eisai will proceed with research and development of medicines and the stable supply thereof in order to fulfill its social responsibility as a pharmaceutical company even in emergency circumstances. To learn more about Eisai's response against the novel coronavirus infection, please view the [information](#) posted on our corporate website.
